

Module 8

This module really helped me to finally get my files organized and labeled appropriately! Since the files for our assignments have been accumulating more and more, I was starting to get a little overwhelmed and confused when trying to work on new modules and find the files I was looking for. All of my work was remote of organization since it was jumbled together in one folder with no rhyme or reason. I decided to place each module in its own folder in order to make it easier for me to view and find each file with efficiency. I also went through and checked that my files were free of spaces, capital letters, and other characters other than dashes to ensure that I was following best practices to enhance the organization process. Especially after looking at session 10, I thought that using relative paths would be appropriate since I'm linking pages on my own site which would make it respond quicker.
